### Our Story

Made in Norfolk, VA

It all started back in 2022 when our fellow students noticed that most of them were struggling in standing queue for more time and waiting for their food orders and decided to do something about it. ODU FOOD HUB was born out of necessity, innovation, and putting the needs of people first.

Here could have predicted the growth our Small Business has achieved since then, but the hardwork and dedication of our team of professionals is the story of our success. We never rest on our laurels, and are always striving to expand our product offerings and improve our service.

### ODU Food Delivery App

A food delivery app that provides food deliver at your step by showing the wait times. To help the students in the campus at ODU when ordering food by notifying them on wait times at restaurants and also displaying menu of each restaurant for them to order food with different food categories like vegetarian and Non-vegetarian choices. If a restaurant is crowded on campus, the student shall be notified on it and he/she thus can go later to grab food instead of waiting in the long queue to grab the food.

## Use Cases:

Below are use cases which are used in the ODU Food order application to order the food to identify and organize the user system requirements.

**Application Features:** Below are the features of the Food ordering application.

### HOME SCREEN

User should not spend more than 30 seconds on the home screen after their initial login. User should be able to see the wait times. Wait times should be automatically updated by restaurants for every 30 seconds by checking the orders.

### PLACE ORDER

User able to add the food items to their cart but donot complete the purchase process because there are too many steps and the cart is hard to edit and user should also check the wait times to proceed with the dish.

### RESTAURANT PROFILE

Providing the restaurant's profile and their wait times, reviews & rating will make it more easy to the customers to find or order the quality food.

### PUSH NOTIFICATIONS

Customer can get notifications related to their food order history ,new offers, feedbacks etc.. This feature will increase the usability of the app.

### ORDER HISTORY

User and restaurants should able to check the order history

### ALERTS

Users should get the alert notification on restaurant wait times, order status and the offers if any.

### DISCOUNT COUPONS/OFFERS

Discount Coupons/Rewards and Cashback are the best and easiest way to attract more number of users.

### REORDER/ORDER CUSTOMIZATION

Allow the customers to reorder the food items again easily according to their previous history. User can customize their order according to their needs like vegetarian or non-vegetarian

### SEARCH & FILTER

Design a search experience that allow users to quickly and find relevant food options and wait times of particular restaurant.

### ORDER OPTION

User should able to select the orders by selecting the options like pick-up or Delivery according to their wish by checking the wait times of the restaurant.

### LIVE UPDATES

Using this feature user can track their food status, restaurant wait time, special dishes etc..

### PAYMENT MODES

All type of payment modes including PayPal, Apple Pay, Google Pay, Net Banking, Credit Card, Debit Card and E-Wallet.
